Monoclonal Antibodies Against Dopamine Receptor Subtypes D1a and D1b

Application

- Useful in dopamine receptor ligand studies to differentiate between D1-like dopamine receptor subtypes.

Details

- **SG2-D1a** – anti D1a dopamine receptor
  - tested with immunoblot and immunohistochemistry techniques
  - tested in rat

- **SG4-D1b** – anti D1b dopamine receptor
  - tested with immunoblot and immunohistochemistry techniques
  - tested in rat
