

RESEARCH STUDY:

Individuals with Lower-Limb Loss Needed

The University of North Texas Health Science Center is doing a research study to understand walking symmetry and fall risk in individuals with limb loss.

You are invited to participate if you meet the following criteria:

- You are 18 - 95 years old
- You have been walking on your prosthesis for at least one year
- You have limb loss on only **ONE** of your legs between your ankle and hip
- You can walk independently without the use of an assistive device such as a cane or walker for at least five minutes or 100 yards

The study involves:

- Completing surveys and performing short walking tests while using wearable sensors
- All surveys and walking tests are commonly performed in clinical practice
- Testing may take up to 2 hours
- You may also be asked to document your falls every 2 weeks over a period of 6 months.

Participants that complete the study will be compensated \$50.

If you are a patient your participation, non-participation, or any response you give will in no way affect the care that you receive at your clinic.
