

UNTHSC School of Public Health

Graduate Certificate in Public Health

Upon completion of the Graduate Certificate in Public Health students will be able to:

- **Identify** theoretical approaches used in facilitating behavioral, social and cultural changes needed for improving population health.
- **Apply** basic biostatistics in research design and data analysis.
- **Discuss** the environmental (physical, chemical, and biological) determinants of health.
- **Identify** how epidemiology contributes to the identification, assessment, evaluation, and prevention of disease at the population level.
- **Discuss** health management and policy and the impact of delivery, quality, and costs of health care for individuals and populations.

15 Credit Hours Required

Courses	SCH
BACH 5300 Theoretical Foundations of Individual and Community Health	3
